Electronics Store Website – Explanation,Features and Development

1. Introduction

ElectroMart is a static electronics shopping website developed using HTML and CSS. It is designed to display electronic products such as laptops, smartphones, wireless headphones, and smartwatches in an attractive and organized layout.

The website allows visitors to browse product categories, view product specifications, compare selected products, check prices and discounts, and read special offers.

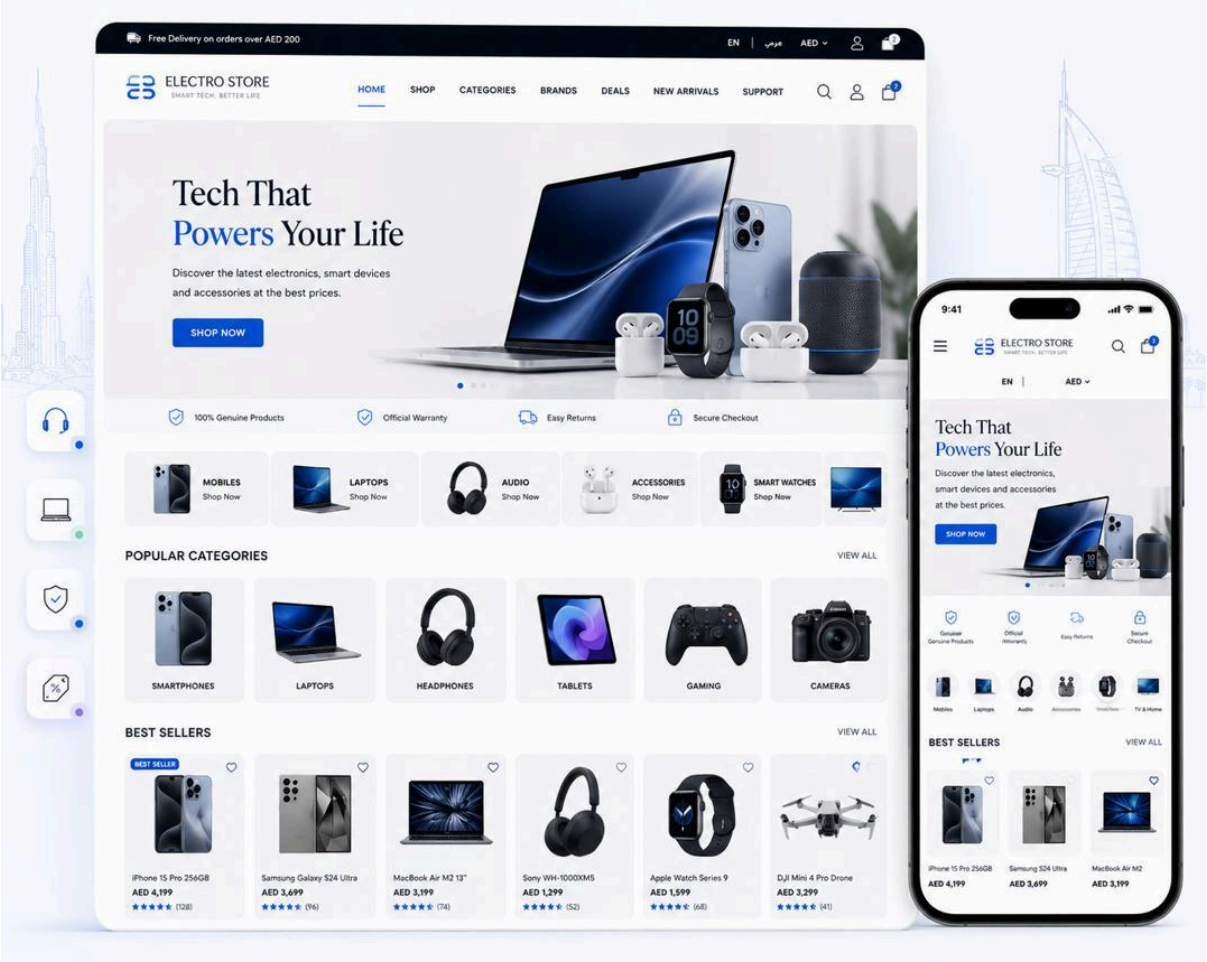

The website uses a blue, teal, and white color scheme to create a modern electronics-store appearance. It also includes responsive design features to improve its display on desktops, tablets, and mobile phones.

Technologies used

- HTML5: Creates the structure and content of the website.
- CSS3: Controls the colors, fonts, spacing, product grids, buttons, and responsive layout.
- External images: Unsplash image URLs provide product photographs.
- Web browser: Displays the completed website.

Note: The supplied code begins with `!DOCTYPE html`. It should be corrected to `<!DOCTYPE html>` for the proper HTML5 declaration.

2. Features of the ElectroMart website

1. Header and Navigation Bar

Displays the ElectroMart name, tagline, and navigation links for Home, Categories, Products, Compare, and Contact.

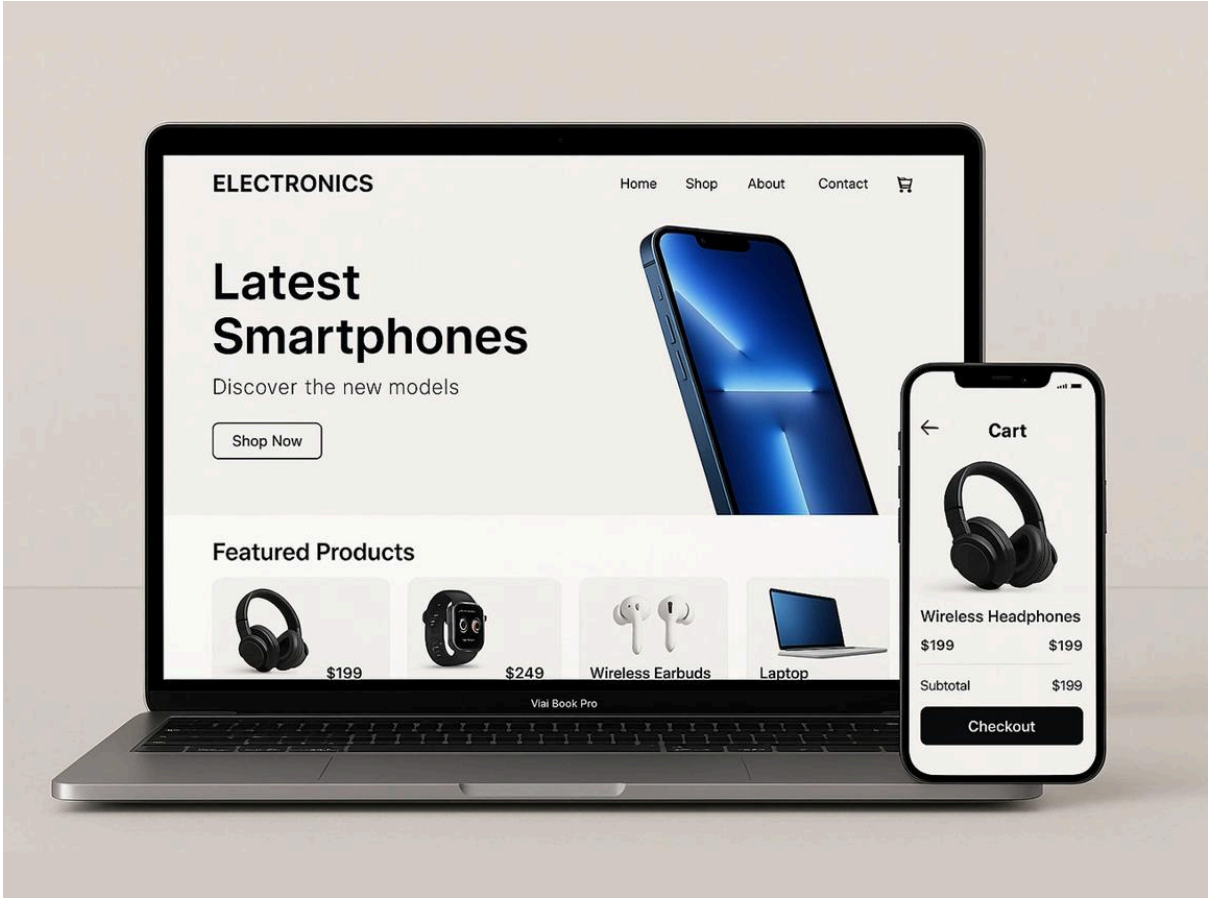

2. Promotional Banner

Highlights the electronics sale, advertises discounts of up to 40%, and includes an Explore Products link that takes users to the product section.

3. Product Categories

Organizes products into four categories: Laptops, Smartphones, Accessories, and Smart Devices.

4. Product Display

Presents four product cards with images, specifications, prices, original prices, discount labels, ratings, and View Details buttons.

A	B	C
	iPhone XS Max	**MacBook Pro 13**
CPU	A12 (4 Cores, 7 nm)	Intel Core i5 (4 Cores, 14 nm)
GPU	A12 (6 Cores, 7 nm)	Intel Iris Plus Graphics 640 (48 EUs, 14 nm)
RAM	4 GB	8 GB
Storage	512 GB	512 GB
Screen resolution	2688 x 1242	2560 x 1600
Weight	208 gr	1,370 gr
Size	157 x 77 x 7 mm	304 x 212 x 14 mm
Cameras	2x12 MP	2.1 MP
Geekbench Single Core	4,800	4,500
Multi Core	10,200	16,400
Price	$1,499	$1,699

5. Product Comparison Table

Compares the HP Laptop and Smartphone based on RAM, storage, display size, price, and discount.

6. Special Offers and Contact

Displays promotional messages, delivery information, contact email, and copyright details.

3. Explanation of the HTML code

HTML stands for HyperText Markup Language. It defines the structure of the webpage and organizes its content into different sections.

HTML element	Explanation

`<!DOCTYPE html>`	Declares that the document uses HTML5.
`<html lang="en">`	Defines the HTML document and specifies English as its language.
`<head>`	Contains information about the webpage.
`<title>`	Sets the browser tab title to ElectroMart - Electronics Store.
`<style>`	Contains the CSS rules used to design the webpage.
`<body>`	Contains all visible webpage content.
`<header>`	Displays the website name and tagline.
`<nav>`	Creates the navigation menu.
`<a>`	Creates links to different sections of the webpage.
`<section>`	Groups related content, such as categories, products, and comparisons.
`<div>`	Groups elements for layout and styling.
`<h1>`, `<h2>`, `<h3>`	Define headings at different levels.
`<p>`	Displays product descriptions, prices, and other text.

`<img>`	Displays product images using external image URLs.
`<span>`	Displays discount labels.
`<button>`	Creates the View Details buttons.
`<select>` and `<option>`	Create the category filter dropdown.
`<label>`	Identifies the purpose of the category dropdown.
`<table>`	Displays product comparison information in rows and columns.
`<tr>`	Creates a table row.
`<th>`	Defines a table heading cell.
`<td>`	Defines a table data cell.
`<del>`	Shows the original price with a strikethrough.
`<footer>`	Displays contact and copyright information.

Important HTML attributes

- `class`: Assigns a CSS class to an element, such as `product-card` or `banner`.
- `id`: Identifies a particular section of the webpage.
- `href`: Specifies the destination of a link, such as `href="#products"`.
- `src`: Specifies the URL of a product image.

- `alt`: Provides alternative text describing an image.
- `for`: Connects the category label to the dropdown with `id="category"`.

How navigation works

The navigation menu uses anchor links to move between sections of the same webpage.

For example:

Products

This link moves the visitor to the section containing `id="products"`.

Similarly, the Explore Products button uses `href="#products"` to direct users to the product section.

4. Explanation of the CSS code

CSS stands for Cascading Style Sheets. It controls the appearance and layout of the website.

CSS property	Purpose in the website
`margin: 0;`	Removes default outer spacing.
`padding: 0;`	Removes default inner spacing.
`box-sizing: border-box;`	Includes padding and borders in the specified dimensions.
`font-family: Arial, sans-serif;`	Sets the font style.
`background-color`	Applies colors to the page, header, navigation, and cards.

`color`	Sets the text color.
`text-align: center;`	Centers text and content.
`padding`	Adds space inside elements.
`margin`	Adds space outside elements.
`display: grid;`	Arranges categories and products into a grid.
`grid-template-columns: repeat(4, 1fr);`	Creates four equal-width columns.
`gap`	Adds spacing between grid items.
`border-radius`	Rounds the corners of cards, banners, and buttons.
`box-shadow`	Adds shadows to product and category cards.
`object-fit: cover;`	Fits images into their containers while cropping excess content.
`font-weight: bold;`	Makes text bold.
`cursor: pointer;`	Shows a pointer cursor when hovering over a button.

`:hover`	Changes the appearance of links or buttons when the pointer is over them.
`border-collapse: collapse;`	Combines adjacent table borders.
`tr:nth-child(even)`	Applies an alternating background color to even-numbered table rows.
`linear-gradient()`	Creates the banner's gradient background.
`@media`	Applies different layout rules for different screen widths.

Color scheme

The website uses the following main colors:

Color	Usage
Dark blue (`#123456`)	Header, headings, and table headings
Teal (`#087e8b`)	Navigation bar and buttons
Light blue (`#cce5ff`)	Promotional banner gradient
Light teal (`#d6f5f5`)	Banner and special-offer background
Green (`#16834a`)	Product prices

Orange-red (`#c0392b`)	Discount labels
White (`#ffffff`)	Product cards and text on dark backgrounds

These colors help distinguish the different parts of the website and maintain a consistent design.

5. Product details displayed

The website contains four product cards.

HP Laptop

- Processor: Intel Core i5
- RAM: 8GB
- Storage: 512GB SSD
- Price: ₹49,999
- Original price: ₹62,499
- Displayed rating: 4.5/5
  20% OFF

Smartphone

- Storage: 128GB
- RAM: 8GB
- Display: OLED
- Price: ₹24,999
- Original price: ₹29,499
- Displayed rating: 4.6/5
  15% OFF

Wireless Headphones

- Bluetooth connectivity
- Noise isolation
- Long battery life
- Price: ₹2,999
- Original price: ₹3,999
- Displayed rating: 4.4/5
  25% OFF

Smart Watch

- Fitness tracking
- Heart-rate monitoring
- Notifications
- Price: ₹3,499
- Original price: ₹4,999
- Displayed rating: 4.3/5
  30% OFF

The product information, prices, ratings, and discounts are example values hardcoded in the HTML. They are not live inventory or verified customer ratings.

6. Product comparison feature

The Product Comparison section displays a table comparing the HP Laptop with the Smartphone.

Specification	HP Laptop	Smartphone
RAM	8GB	8GB
Storage	512GB SSD	128GB
Display	15.6-inch	6.5-inch
Price	₹49,999	₹24,999
Discount	20%	15%

The table helps users compare selected specifications in a structured format.

The table is created using `<table>`, `<tr>`, `<th>`, and `<td>` elements. CSS adds borders, padding, centered text, and alternating row backgrounds.

7. Responsive design

Responsive design enables a website to adapt to different screen sizes.

The ElectroMart code contains two media queries:

Tablet layout

```
@media (max-width: 900px) {
    .product-grid {
        grid-template-columns: repeat(2, 1fr);
    }

    .category-grid {
        grid-template-columns: repeat(2, 1fr);
    }
}
```

When the screen width is 900 pixels or less, the product and category grids display two columns instead of four.

Mobile layout

```
@media (max-width: 500px) {
    .product-grid,
    .category-grid {
        grid-template-columns: 1fr;
    }
}
```

When the screen width is 500 pixels or less, the product and category grids display one column. The navigation spacing, banner heading, and table text sizes are also adjusted.

This improves readability and reduces horizontal crowding on smaller screens.

8. Development process

The website can be developed in the following stages.

Step 1: Planning

Identify the website's purpose, categories, products, and required sections.

Step 2: HTML Structure

Create the header, navigation, banner, categories, product cards, comparison table, and footer.

Step 3: CSS Design

Apply the colors, fonts, grid layouts, shadows, spacing, and button styles.

Step 4: Add Product Information

Insert product images, descriptions, prices, discounts, ratings, and specifications.

Step 5: Responsive Styling

Use media queries to adapt the layout for tablets and mobile devices.

Step 6: Testing and Deployment

Check the links, images, layout, and browser display before publishing the website.

How to run the website

1. Open Notepad or Visual Studio Code.
2. Copy the complete HTML and CSS code into a new file.

3. Correct the first line to `<!DOCTYPE html>`.
4. Save the file as `electromart.html`.
5. Open the file in a web browser such as Google Chrome.
6. Test the navigation links and view the website at desktop, tablet, and mobile widths.

An internet connection is generally needed to load the externally hosted product images.

9. Advantages of the website

- User-friendly interface: Navigation and product cards make information easy to find.
- Attractive design: Blue and teal colors provide a consistent electronics-store theme.
- Product information: Customers can view specifications, prices, ratings, and discounts.
- Comparison table: Selected laptop and smartphone specifications can be compared easily.
- Responsive layout: The page adapts to different screen sizes.
- Easy maintenance: Reusable CSS classes make styling and updates simpler.
- Expandable design: Additional products and categories can be added to the existing structure.

10. Limitations and future enhancements

The current ElectroMart website is a static front-end website. Some controls are displayed visually but do not perform their expected shopping functions.

Current limitation	Suggested improvement
Category filter does not filter products	Use JavaScript to filter product cards.
View Details buttons have no action	Link each button to a product detail page or modal.
No shopping cart	Implement cart functionality with JavaScript and persistent storage or a backend.
No search feature	Add product search and sorting.

Product details are hardcoded	Load product data from a database or API.
No checkout or payment process	Build a secure checkout system with a trusted payment provider.
No customer login	Add secure registration and authentication.
No live inventory	Connect products to a stock-management system.

The email address `support@electromart.example` is a placeholder and should be replaced with a real contact address before publication.

11. Conclusion

The ElectroMart Electronics Store website demonstrates the use of HTML and CSS to develop a structured, attractive, and responsive e-commerce interface. Its main components include a navigation bar, promotional banner, product categories, product cards, discount labels, a comparison table, special offers, and contact information.

The project is suitable for beginners learning web development because it demonstrates important concepts such as HTML elements, CSS styling, CSS Grid, tables, hyperlinks, and media queries.

In the future, JavaScript, a backend framework, and a database could be added to turn ElectroMart into a more functional online shopping application with product filtering, cart management, customer accounts, and order processing.
