Online Shopping Website – Explanation,Features and Development

1 Introduction

ShopEasy is an online shopping website designed to showcase products and promotional offers in a simple and attractive format. It allows visitors to browse product categories, view product images and descriptions, check ratings and prices, and read information about discounts and delivery.

The website uses a purple-and-white color theme with a promotional banner and product cards to create an e-commerce-style interface.

2 Features

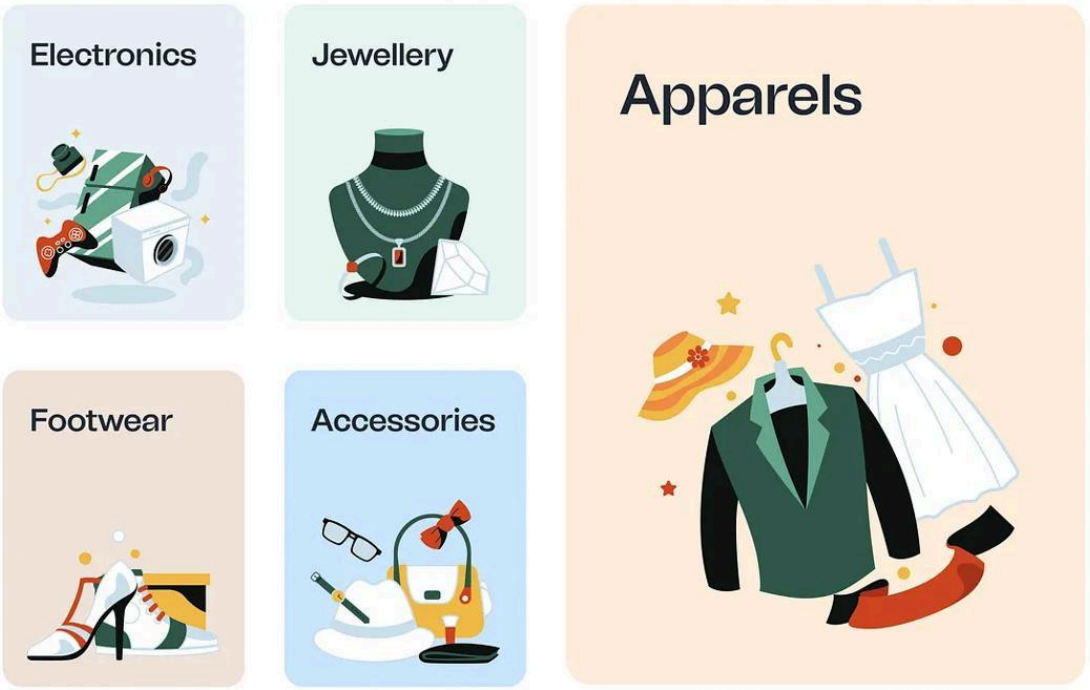

1. Header and Navigation

Displays the ShopEasy brand and links to Home, Categories, Products, Offers, and Contact sections.

2. Promotional Banner

Highlights a shopping sale and an advertised discount of up to 50%, with a Shop Now link that jumps to the product section.

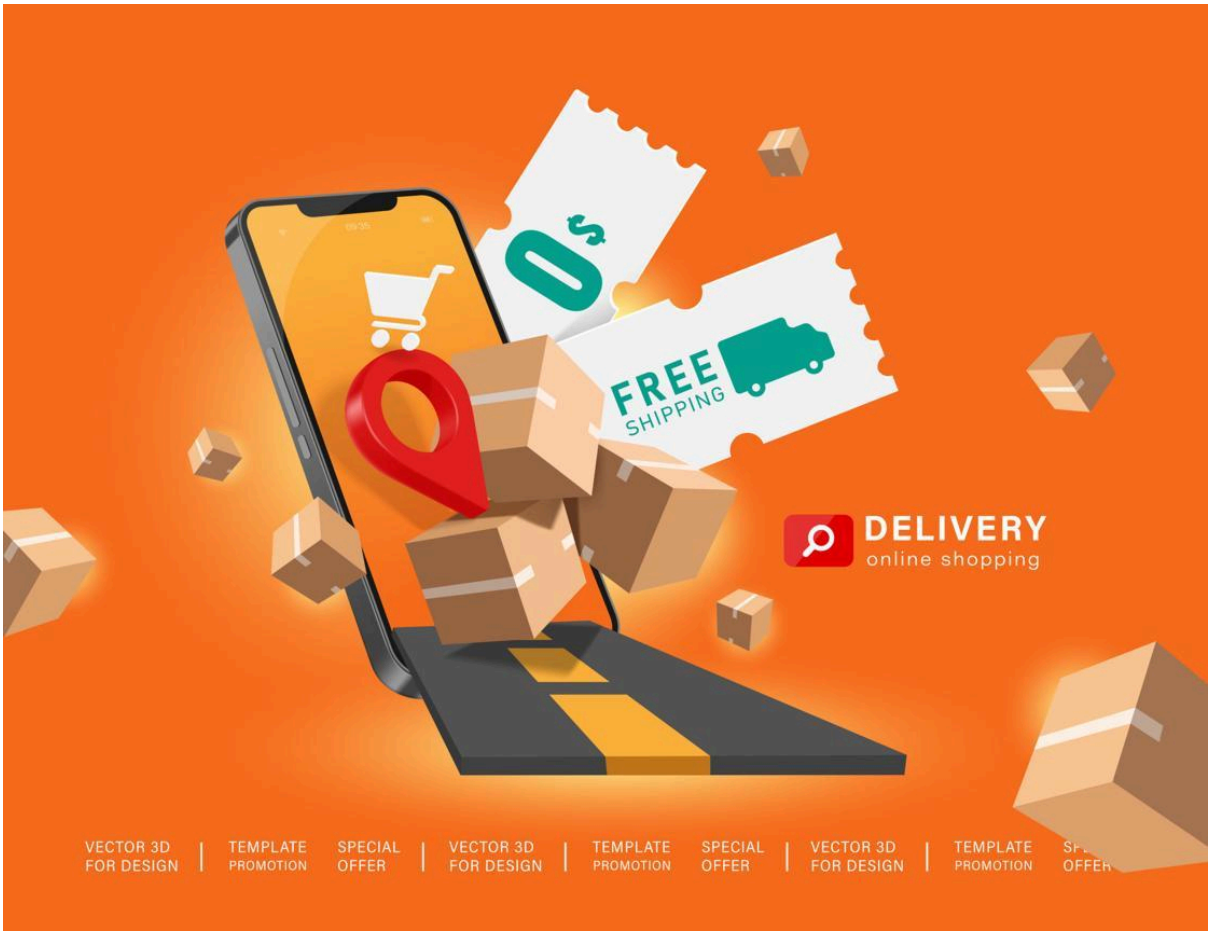

3. Product Categories

Presents Fashion, Electronics, Accessories, and Footwear in a grid.

4. Featured Products

Shows four product cards containing images, descriptions, ratings, current prices, original prices, discounts, and Add to Cart buttons.

5. Special Offers and Contact

Advertises deals and free delivery on orders above ₹999, followed by contact and copyright information.

3 Featured product details

The following products are defined in the HTML code.

Product	Selling price	Original price	Displayed discount	Rating
Classic Wrist Watch	₹999	₹1,499	33% OFF	4.5/5
Wireless Headphones	₹1,499	₹2,499	40% OFF	4.7/5

Sports Shoes	₹1,199	₹1,999	40% OFF	4.3/5
Cotton T-Shirt	₹499	₹799	37% OFF	4.4/5

These prices, ratings, and discounts are example values entered directly in the code, not live product data.

4 Explanation of HTML elements

HTML element	Purpose
`<!DOCTYPE html>`	Declares the document as HTML5.
`<html lang="en">`	Specifies English as the page language.
`<head>`	Contains document information.
`<title>`	Sets the browser tab title.
`<style>`	Contains the CSS rules.
`<body>`	Contains all visible website content.
`<header>`	Displays the ShopEasy name and tagline.
`<nav>`	Creates the navigation menu.

`<a>`	Creates links to website sections.
`<section>`	Groups the banner, categories, products, and offers.
`<div>`	Groups category tiles and product cards.
`<img>`	Displays product photographs.
`<h1>`, `<h2>`, `<h3>`	Define the main title and section/product headings.
`<p>`	Displays product descriptions, prices, ratings, and other text.
`<del>`	Displays the original price with a strikethrough.
`<span>`	Displays discount information.
`<button>`	Displays an Add to Cart button.
`<footer>`	Displays contact details and copyright information.

Important attributes and classes

- `id` identifies a section so that a navigation link can jump to it.
- `class` assigns CSS styles to elements, such as `.banner`, `.product-grid`, and `.price`.
- `href="#products"` directs the Shop Now link to the products section.
- `src` provides the URL of the product image.
- `alt` provides alternative text for the image.

5 Explanation of CSS

CSS property	Function
`background-color`	Applies background colors to the page, header, and cards.
`linear-gradient()`	Creates the gradient effect in the promotional banner.
`font-size`	Controls text size.
`font-weight: bold;`	Makes important text bold.
`display: grid;`	Arranges categories and products into columns.
`grid-template-columns: repeat(4, 1fr);`	Creates four equal-width columns.
`gap`	Sets spacing between cards.
`width: 100%;`	Allows product images or buttons to fill their container's width.
`height: 180px;`	Sets the product image height.
`object-fit: cover;`	Crops images proportionally to fill their assigned area.
`border-radius`	Rounds the corners of the banner, cards, and buttons.

`box-shadow`	Adds depth to product cards.
`text-decoration: none;`	Removes the default underline from navigation links.
`cursor: pointer;`	Displays a pointer cursor over buttons.
`:hover`	Changes the appearance of navigation links and buttons when hovered.
`@media`	Applies different layout rules at specific screen widths.

Responsive design

The code includes two media queries:

- At widths up to 900px: product cards and category tiles change from four columns to two columns.
- At widths up to 500px: both grids change to a single column, navigation spacing adjusts, and the banner heading becomes smaller.

This makes the website more readable on tablets and mobile phones.

6 Development process

Step 1: Plan the e-commerce layout

Decide on the header, navigation, banner, categories, products, offers, and contact area.

Step 2: Write the HTML

Create the webpage sections and add product content.

Step 3: Design with CSS

Apply colors, typography, grids, shadows, and spacing.

Step 4: Add products and offers

Insert product images, prices, ratings, discounts, and delivery information.

Step 5: Test the website

Check navigation links, image display, layout, and responsiveness.

7 Advantages

- Attractive and organized product presentation.
- Clear display of prices, discounts, and ratings.
- Easy navigation between sections.
- Responsive product grids.
- Reusable CSS classes make the code easier to maintain.
- Can be expanded into a complete e-commerce application.

8 Limitations and future improvements

The current ShopEasy website is a static front-end demonstration, not a complete online shopping system.

The following features would need additional development:

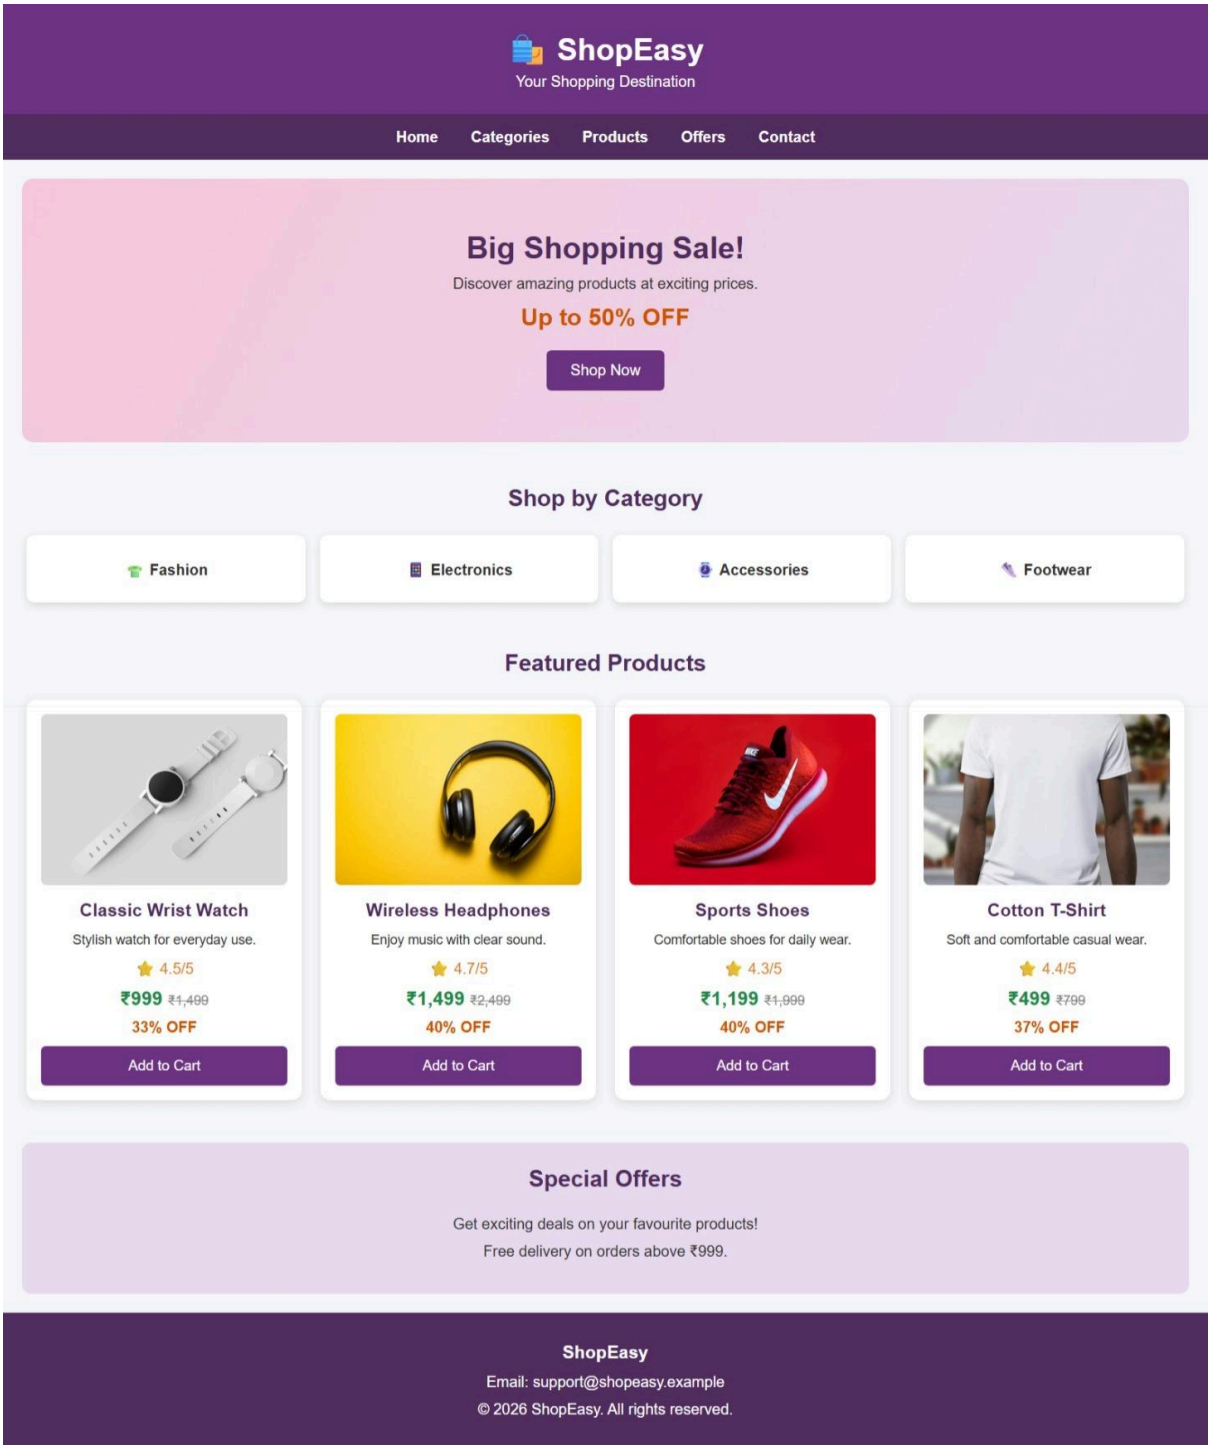

- Shopping cart: Add JavaScript to make Add to Cart buttons work.
- Product search and filtering: Allow users to find products by name or category.
- User accounts: Add registration, login, and profile management.
- Checkout: Build a checkout process with suitable payment integration.
- Database: Store product details, stock levels, orders, and customer information.
- Order tracking: Let users check the status of purchases.
- Security: Implement secure authentication and server-side validation before handling customer or payment data.

The contact email `support@shopeasy.example` is a placeholder and should be replaced with a real contact address if the website is deployed.

9 Conclusion

The ShopEasy Online Shopping Website demonstrates how HTML and CSS can be used to build an attractive shopping interface. It presents products, prices, discounts, ratings, and promotional offers in a clear layout. JavaScript and a backend system could later be added to support real shopping operations.

10 Output

11 Code

```
<!DOCTYPE html>

<html lang="en">
```

```
<head>
    <title>Online Shopping Website</title>
</head>
<style>
    * {
    margin: 0;
    padding: 0;
    box-sizing: border-box;
}

body {
    font-family: Arial, sans-serif;
    background-color: #f5f6fa;
    color: #333;
}

header {
